To: Review Audience  
From: Jada York  
Subject: Report on ways to open crab legs for consumption.

I have inserted my report on ways to open crab legs for consumption.

In conclusion, my project shows and describes two ways to open crab legs for consumption. I wanted to display an authentic and relatable video to follow. That is my purpose. This project will allow me to achieve my purpose visually and audibly.

The audience ranges from all levels of experience and age, as long as the individual enjoys seafood. This affected my choice of medium after my first draft. I needed to include more than one option for more than one type of person or persons. I needed to make it easy to follow, optional, and casual. For example, I used a relaxing and fun song. This was so that my video had a joyful tone to pair with my voice and speaking. I also dressed casually. The video is straight to the point, including small information about my personal experiences and credibility, in the end.

I did not use any GenAI in this project. I do my best to avoid any plagiarism in school and with AI. I typically only ask specific questions that help me write or plan. I did not need AI for this project. I only used Google to research my topic. For example, the text definition and explanation of crab legs, I addressed in my video. The definition was something I was already aware of, but I fact-checked myself throughout my project. I also googled the correct terminology for the seafood tools I used.

There are a few things I would like for my instructor to know from me about this project. I wanted it to be fun and strict, but still follow the project requirements. I also appreciate that I was allowed to take a theme from my first project. Seafood. I wish I had found a way, to incorporate my interview; I did a little more for credibility.
